

EASY DROP

eBay Dropshipping

From zero to a live eBay shop — and a repeatable system

United States Edition

Welcome

If you're reading this, it's probably because you want to find out how to build a business around eBay — without starting with a huge stock of inventory, a warehouse, or a few thousand dollars in the bank.

The goal of this training is simple:

Take you from zero to a working eBay shop, with your first products published, and a system you can gradually automate.

Why eBay, and not Shopify like everyone else?

- Because eBay.com already has well over a hundred million active US buyers searching for products every single day. You don't need to pay for ads to exist.
- Because you can get started with a modest amount, not a few thousand dollars.
- Because while everyone else is fighting it out on TikTok Shop and Shopify, eBay remains a comparatively under-exploited channel for this kind of methodical, niche-based approach.

You don't need to be an e-commerce expert. You don't need to watch 20 hours of theory. You're going to learn by building.

Throughout this training, we use EBX as the central tool: product research, analysis, importing, listing creation and automation.

👉 Access EBX here: ebx.army/aff-business (Affiliate link)

 *Full transparency: this training makes no guaranteed-income promises. Your results will depend on the products you choose, your margins, your work, the quality of your suppliers, and your ability to follow eBay's rules. The people who fail are the ones who don't take action. The people who succeed are the ones who execute, measure, and adjust.*

MODULE 1: GETTING STARTED ON EBAY

By the end of this module you should have:

- ☐ Your seller account created and configured
- ☐ Your essential settings defined
- ☐ A clear understanding of the model
- ☐ A shop ready to welcome its first products

1.1 How does eBay dropshipping work?

The principle fits in three lines:

- You identify a product from a supplier.
- You create a listing on eBay and offer it to your customers.
- When a customer buys, you order it from the supplier, who ships it, and you keep the difference.

Simple example

eBay sale price: \$54.90 — Product cost: \$27. That leaves a gap... before fees.

| And this is exactly where 90% of beginners go wrong:

A product that LOOKS profitable isn't necessarily profitable. You must always calculate: Sale price – product cost – eBay fees – shipping – other costs = real profit.

We cover the full method, with real numbers, in module 3.

1.2 What you need to get started

Good news: your starting "stack" is minimal.

- An eBay account (business account, for regular selling activity)
- A payment method and a dedicated US business bank account (even a free online one)
- A computer and an internet connection
- A supplier (AliExpress, Amazon)
- EBX for research, importing and automation

The goal is not to pile up software. The goal is a simple stack you understand and use every day.

1.3 Creating your eBay seller account

Don't rush this step. Your account is the foundation of your business: a configuration mistake today is a problem tomorrow.

Fill in carefully: your identity, your contact details, your payment information, and your sales settings on eBay.com.

✅ **Action: create or configure your eBay account before moving on.**

1.4 Configuring your essential settings

Before you publish anything, you need to know how you'll handle: shipping, processing times, returns, payments, and customer communication.

Absolute rule: never list a product before knowing how you'll handle the order if it comes in tomorrow morning.

1.5 Understanding eBay's rules

The goal of this training is NOT to work around eBay. Quite the opposite: you want to build an account that lasts for years.

eBay has policies covering dropshipping, shipping, seller performance, returns and customer satisfaction. You need to know the rules of the game.

You are responsible for your customer's experience. Even though the supplier ships the item, it's YOUR eBay account that gets evaluated.

So you need to keep as much control as possible over: timelines, stock, tracking, quality, returns, and customer service.

1.6 Mistakes that can get an account limited or suspended

Beginners want to publish as many products as possible, as fast as possible. That's the wrong approach. Priority number one is a CLEAN account.

Avoid at all costs:

- Incorrect listing information
- Prohibited or counterfeit products
- Unrealistic promises (impossible delivery times, misleading descriptions)
- Repeated cancellations
- Poor customer service practices
- Any manipulation to work around eBay's rules

Your goal isn't 100 sales in month one. Your goal is a business still standing in 6 months, 1 year, and beyond.

BONUS: "IS MY EBAY ACCOUNT READY?" CHECKLIST

Before moving to module 2:

- ☐ My seller account is created
- ☐ My information is complete
- ☐ My payment details are configured
- ☐ My shipping settings are defined
- ☐ My return conditions are defined

- ☐ I understand eBay's main rules
- ☐ I know how I'll handle an order
- ☐ I'm ready to start my product research

If every box is checked? Move on to module 2.

MODULE 2: FINDING YOUR NICHE AND PRODUCTS

By the end of this module you'll be able to identify several products with potential and start your test-product list.

| *Don't look for the miracle product. Look for opportunities.*

2.1 Choosing a niche

A niche is a coherent range of products you build your catalogue around: automotive, home, garden, DIY, pets, sport, everyday accessories...

Why a niche?

Picture two shops.

- The first sells: an LED lamp, a dog toy, a car part, and a kitchen gadget.
- The second sells: home and garden equipment and accessories.

The second immediately inspires more confidence. It has an identity. eBay understands your catalogue better, and so do your customers.

2.2 What makes a good niche

- Real demand: people are ALREADY searching for these products.
- A wide catalogue: you should be able to find dozens of products in it.
- Prices that leave room for margin: A product bought for \$3 and sold for \$5 won't even cover your fees.
- Exploitable competition: if others already sell it, that's proof of demand. Competition is a signal, not a wall.

2.3 Products to favour

When you're starting out, look for products that are:

- Simple and easy to understand
- Easy to ship, not fragile
- With identifiable demand and a sufficient margin
- Available from several suppliers (if one lets you down, you switch)

On the other hand, avoid (at first) products that are: regulated, dangerous, counterfeit, very fragile, prone to returns (sized clothing), or hard to ship.

2.4 EBX: your product-research accelerator

The goal isn't to scroll eBay for five hours hoping for inspiration. We use a process:

| **RESEARCH → FILTER → ANALYSE → COMPARE → TEST**

In EBX, you explore opportunities and analyse, for each product: supplier price, sales potential, competition, and the gap between buy price and sell price.

 With EBX, you'll learn:

- how to create your EBX account
- how to connect it to your eBay.com environment
- how to run a search and analyse a product
- how to select the interesting products

 **Code: EBX-AFF-BUSINESS**

2.5 Your mission

Open EBX and repeat each step.

| *Goal: find 10 potentially interesting products. Not sell them. Just build your first list.*

MODULE 3: FINDING A PROFITABLE PRODUCT

You have a list of products, but careful:

An interesting product isn't necessarily a profitable product. This module is what separates the people who make money from the people who lose it without understanding why.

3.1 The beginner's fatal reflex

You find: sale price \$54.90 — supplier price \$27.00.

Your brain says: "I'm almost keeping all of the difference!"

No. Here's why, with real numbers.

3.2 The full calculation

eBay US charges a category-based final value fee (roughly 2.5%–15% depending on category; most general categories sit around 13.6% for sellers without a Store subscription, a little lower with a Store), plus a fixed \$0.30 (or \$0.40 on orders over \$10) per-order fee. Always check eBay's current US seller fee schedule for your category before pricing — rates are revised periodically.

Item	Amount
Sale price (shipping included)	\$54.90
Supplier product cost (shipping included)	- \$27.00
eBay fees (~13.6% of \$54.90 + \$0.40 per order)	- \$7.87
Tool cost (EBX, per product)	- \$0.55
Returns / disputes provision (~3%)	- \$1.65
PROFIT ≈ YOUR OWN TAX / ACCOUNTING	≈ \$17.83

Note: this figure is your profit before your own personal or business tax and accounting obligations, which this training doesn't cover — an accountant can help you with those. Your "almost the full difference" just shrank quite a bit. It's still profitable, but nowhere near what the naive calculation suggested. Imagine if you'd set your price based on the wrong number.

The right question is never "how much does my product cost?" but "how much do I ACTUALLY have left after every cost?"

3.3 Your cost checklist before every listing

- ☐ Supplier purchase price (shipping included!)
- ☐ Target sale price

- ☐ eBay fees that apply to your category
- ☐ Shipping cost if you're offering it for free
- ☐ Returns and disputes provision (2-5% depending on the product)
- ☐ Any import duty or tax that applies to the product itself (see module 4)
- ☐ Your tool costs, allocated per product

3.4 The 5-minute rule

For every product, you should be able to answer these 5 questions in under 5 minutes:

- Does the product actually sell? (proof: competing sales)
- What does it really sell for?
- What does it cost me, all in?
- What NET margin can I realistically expect?
- What's the risk (returns, fragility, seasonality)?

| If you can't answer all 5 questions: don't publish yet.

Margin rule for beginners

Aim for a net profit of at least \$5 AND at least 15% of the sale price per product. Below that, a single dispute wipes out the profit from several sales.

MODULE 4: FINDING YOUR SUPPLIER

Module goal:

You've identified products. Now you need to know where to find them and who to buy them from.

A good product with a bad supplier = a disaster. An average product with a rock-solid supplier = a calm business.

4.1 AliExpress — read this before you rely on it

AliExpress can still work for small, lightweight products, but the US sourcing landscape changed materially in 2025: the \$800 "de minimis" exemption that let low-value parcels enter the US duty-free was suspended, first for China and Hong Kong, then for all countries. In practice, most direct-from-China parcels — including typical AliExpress orders — are now subject to duty/tariff charges that didn't exist a couple of years ago, and formal customs handling is more involved.

This is an operational sourcing issue, not a comment on your personal taxes — but it directly changes your landed cost math, so treat it as seriously as your product cost. Before you commit to a niche built on cheap China-direct items, check current duty rates and process at cbp.gov (U.S. Customs and Border Protection), and re-run your module 3 margin calculation with duty included.

Practical ways sellers are adapting:

- Prioritise AliExpress/CJ dropshipping sellers who explicitly list a US warehouse — goods already inside the US aren't hit with per-order import duty the way direct-from-China parcels are
- Consider bulk-importing stock (duty paid once, in bulk) and fulfilling from a US-based 3PL or your own address, rather than drop-shipping each order individually from overseas
- Build in the duty/tariff cost per unit explicitly in your module 3 calculation instead of assuming it's zero
- Keep an eye on rates — they have changed more than once since 2025 and can change again

Before choosing any AliExpress supplier, also check: order volume and seller ratings, recent reviews (recent problems matter more than the overall average), stated delivery times and any US-warehouse options, stock availability, and return conditions.

Never choose a supplier on price alone. The cheapest supplier is almost never the best one, and right now it's also often not the cheapest once duty is added.

4.2 Amazon

Useful for bulkier products, domestically-fulfilled goods, or when your customer expects fast delivery: garden equipment, power tools, light furniture. Because the item is already in the US, you avoid the import-duty complications above.

 Important distinction: a marketplace is not automatically an authorised wholesale supplier for your eBay activity. Always make sure your sourcing method complies with eBay's rules.

This training is about building a durable business, not risking your account for a handful of extra sales.

Smart sourcing strategy for the US market

- AliExpress (US-warehouse listings) or bulk-imported stock → small, high-margin products where you control the landed cost, duty included
- Amazon.com → bulky/urgent products, where reliable domestic delivery protects your account from disputes

4.3 The 5-point supplier checklist

Criterion	Question to ask yourself
Reliable	Is the stock actually available?
Consistent	Are prices stable over time?
Fast	Are delivery times compatible with what I promise my customers?
Trackable	Can I track every order with usable tracking info?
Responsive	Do I get a reply within 24–48h if there's a problem?

| A supplier that fails on 2 or more criteria: NEXT.

MODULE 5: CREATING YOUR FIRST LISTING

You now have: a niche + a product + a supplier + a validated margin. Time to take action.

5.1 The title: the formula that works

Your title needs to let the buyer (and eBay's algorithm) understand immediately what you're selling.

 *Avoid: "Amazing product of incredible quality!!!"*

 **The formula: [Product] + [key feature] + [use/compatibility] + [differentiating detail]**

- Magnetic car phone mount universal dashboard holder
- Solar garden light LED waterproof motion sensor outdoor
- Kitchen drawer organiser adjustable bamboo cutlery tray

Use the actual words your customer types into search. No jargon, no empty superlatives.

5.2 Photos

Your main photo needs to answer ONE question:

 ***"Do I immediately understand what I'm about to buy?"***

Avoid blurry, cluttered, misleading photos, or ones that don't actually show the product.

Checklist for photos that convert

- Photo 1: the product alone, plain background, filling the frame.
- Photos 2–3: the product in real use.
- Photo 4: dimensions or scale (next to a hand, or a familiar object).
- Photo 5: exactly what's included in the parcel.

Trust starts with the visuals.

5.3 The description

A good description simply answers the customer's questions:

- What is it? What's it for? Who's it for?
- What are its exact specs (dimensions, material, compatibility)?
- What exactly is included in the parcel?
- How and how quickly is it delivered?
- What are the return conditions?

Don't try to write a novel. Try to remove objections.

5.4 Creating the listing with EBX 🚀

This is where EBX saves you a massive amount of time. Instead of recreating everything by hand, you use the tool to speed up the process:

| *Product → Import → Check → Optimise → Publish*

⚠️ **Automating NEVER means publishing without checking.**

Before every publish, check: title, photos, price, item specifics, stock, delivery times, shipping and return conditions.

👉 **Access EBX here: ebx.army/aff-business (Affiliate link)**

MODULE 6: GETTING YOUR FIRST SALES

Your shop exists. Your product is live. Now you need to understand what's happening and know which levers to pull.

| *Don't fall into the trap of refreshing your account every 10 minutes. A shop is steered with data.*

6.1 Reading your funnel: impressions → clicks → sales

Few impressions?

Your listing isn't being shown. The issue is the product, the demand, the category, the SEO (title!), or the competition.

Impressions but few clicks?

You're being seen but not clicked. Check: your main photo, title, displayed price, and how relevant the product is.

Clicks but no sales?

People visit but don't buy. Analyse: total price (shipping included), secondary photos, description, stated delivery times, the trust you're projecting, and direct competition.

| *Your funnel always tells you WHERE it's breaking down. Listen to it instead of guessing.*

6.2 5 concrete levers to trigger your first sales

- Psychological pricing: \$19.99 converts better than \$20.15. Position yourself slightly below direct competitors at launch, then raise prices later.
- "Free" shipping displayed: build the cost into your price. The "free shipping" filter is heavily used on eBay.
- Shop promotions: use eBay's promotion tools (multi-buy discounts, flash sales) to create urgency.
- Short and REALISTIC handling time: a promise you keep beats a fast promise you don't.
- Refresh dead listings: a listing with no impressions for weeks can be deleted and relisted with a new title/photo.

CHALLENGE

| *Publish your first 10 products. Not 100. Not 500. TEN. The goal is to understand what works before growing your catalogue.*

MODULE 7: MANAGING A SALE FROM A TO Z →

Congratulations, you just received your first order. Don't panic: here's your process, step by step.

Step	Action
1	Check the order (product, variant, address).
2	Check the product's availability with your supplier.
3	Check the supplier's price (it may have changed).
4	Place the order following your authorised sourcing method.
5	Get the tracking number.
6	Update tracking information on eBay.
7	Monitor delivery through to completion.
8	Stay available for your customer.

A sale isn't finished when the customer clicks "Buy." It's finished when they've received the product as promised and the case is closed cleanly.

EBX: AUTOMATE ⚡

As your volume grows, these 8 steps become repetitive. That's exactly where EBX's automation features come into their own.

Depending on your plan, you can automate: syncing, stock, pricing, orders, importing, and analysis.

The goal: go from 30 minutes per order to a few minutes of daily supervision.

 **Code: EBX-AFF-BUSINESS**

MODULE 8: CUSTOMER SERVICE, RETURNS & ACCOUNT PROTECTION

A bad customer experience can cost you far more than one order: refund, return, a negative review, a dispute, damaged seller performance stats.

| *Your customer service isn't a chore. It's a core part of the business, and your insurance policy on eBay.*

8.1 The golden rule of customer service

| *Reply fast. Stay professional. Look for a solution.*

Never take a negative message personally. The customer doesn't know your story — they just want their problem solved.

8.2 Ready-to-use reply scripts

Copy, adapt, send. These templates defuse 90% of common situations.

"Where's my order?"

Hi [Name], thanks for reaching out. Your order is on its way — here's your tracking number: [TRACKING]. Delivery is estimated for [DATE]. Let me know if you need anything else. Have a great day!

"I want a refund."

Hi [Name], I understand your request. So I can take care of this quickly, could you let me know the reason for the refund? Depending on the situation I can offer a resolution today (replacement, goodwill gesture, or refund in line with our returns policy).

"The product is faulty."

Hi [Name], I'm really sorry to hear that — that's not the standard I want to offer. Could you send me a photo or two of the defect? I'll prioritize your case as soon as I receive them (replacement or refund, your choice).

"I haven't received anything."

Hi [Name], I'm checking with the carrier right away. According to tracking [TRACKING], the package is showing as [STATUS]. I'm opening a carrier claim now and will get back to you within 24–48 hours with a resolution.

The 3 habits that protect your account

- Reply within 24 hours max, even if it's just to say you're looking into it.
- Refund quickly when you're in the wrong: losing a small amount beats a dispute that tanks your metrics.
- Document everything: screenshots, tracking, message threads. In a dispute, evidence decides the outcome.

MODULE 9: GOING FROM 1 TO 100 SALES

You've got your first sales. Now the game changes: you're no longer just trying to sell, you're trying to understand WHY it sells.

9.1 Finding your winners

A winning product generally ticks these boxes:

- It generates both clicks AND sales
- The net margin is solid (module 3 rule)
- Returns stay manageable
- The supplier is reliable over time

When a product works: don't abandon it to chase something else. Dig deeper.

- Look for similar products.
- Look for variants (colour, size, pack).
- Look for complementary products (a customer who buys X needs Y).

9.2 Cutting the weak products

Your catalogue will always contain three families:

- Winners → reinforce them, add variants
- Average products → optimise or keep monitoring
- Dead products → cut them without hesitation

A catalogue is like a garden: what you prune feeds what grows.

9.3 EBX for scaling

As your catalogue grows, manual management becomes impossible. Your system becomes a loop:

RESEARCH → IMPORT → LISTING → SYNC → ORDER → ANALYSE → OPTIMISE → NEW PRODUCT... and you start again.

Code: EBX-AFF-BUSINESS

MODULE 10: THE COMPLETE EBAY SYSTEM

You now know every step individually. Time to put them together.

THE METHOD

#	Step	Action
1	FIND	Find a coherent niche.
2	RESEARCH	Use eBay and EBX to identify products.
3	ANALYSE	Demand, competition, real sale price.
4	CALCULATE	Check your NET margin (module 3).
5	SOURCE	A reliable supplier compatible with the rules.
6	IMPORT	EBX to speed up listing creation.
7	PUBLISH	Go live after checking everything.
8	SELL	Analyse the first data.
9	OPTIMISE	Improve what can be improved.
10	AUTOMATE	EBX to cut repetitive tasks.
11	REPEAT	Find the next product.

| *That's the system. Not a magic product. Not a secret technique. A process you can repeat endlessly.*

BONUS: THE EBX GUIDE

Your shortcut to revisit every perfect eBay step, powered by EBX:

| *Research → Analyse → Import → List → Sync → Automate.*

👉 Access EBX here: ebx.army/aff-business (Affiliate link)

30-DAY CHALLENGE

From theory to action. Each week has ONE objective, concrete deliverables, and a level to unlock. Check things off as you go.

WEEK 1: BUILD

Objective: a ready-to-go shop.

- Day 1–2: eBay business account created
- Day 3–4: settings, shipping and return policies defined
- Day 5–7: niche chosen and validated (module 2 checklist)

|  **End-of-week boss: your module 1 checklist is 100% checked.**

WEEK 2: SEARCH

Objective: your first products identified.

- EBX configured and connected
- 20 products spotted → filtered down to 10 using the 5-minute rule
- Suppliers validated with the 5-point checklist
- NET margin calculated for every shortlisted product

|  **End-of-week boss: 10 products with a net margin $\geq$ \$5 and $\geq$ 15%.**

WEEK 3: PUBLISH

Objective: your first listings live.

- Import via EBX
- Titles optimised using the module 5 formula
- Photos checked against the checklist
- First 10 products published

|  **End-of-week boss: 10 clean listings live, zero misleading information.**

WEEK 4: OPTIMISE

Objective: understand what's working.

- Reading the funnel: impressions → clicks → sales
- Identifying promising vs. dead products
- Applying at least 2 levers from module 6
- Setting up your first EBX automations

Final boss: you know exactly where your funnel breaks down and what to test next.

FAQ: THE QUESTIONS YOU'RE REALLY ASKING ?

"How much money do I need to get started?"

A modest amount is enough to get the machine running: your eBay subscription, your tool subscription, and a small float to cover your first supplier orders before eBay pays you out. No stock, no ad spend needed.

"Isn't dropshipping dead?"

"Dropshipping" in the sense of pushing random trending gadgets with paid ads is genuinely saturated. This training's model is different: a coherent niche, carefully calculated margins (duty included, see module 4), a clean account, and a channel — eBay — where buyers are already searching. What's dead is amateurism, not the model itself.

"Is this legal?"

Yes — provided you operate as a properly registered business, follow eBay's seller policies, deliver to customers as promised, and stay on top of your tax and accounting obligations, including any import duty due on inventory you source from overseas. This training doesn't cover business registration or tax questions: speak to an accountant or check [irs.gov](https://www.irs.gov) and [cbp.gov](https://www.cbp.gov) directly for guidance specific to your situation.

"How long until I see results?"

Impossible to guarantee — be wary of anyone who gives you a specific number. What the 30-day challenge does guarantee is an ASSET: a live shop, published products, and real data. Financial results after that depend on your execution and how well you iterate.

FINAL OBJECTIVE

You've made it to the end.

But the real question is: what are you going to do NOW?

You should have:

- ☐  Your eBay account set up
- ☐  Your shop and your niche
- ☐  Your suppliers
- ☐  Your first products and listings
- ☐  Your tracking system and first data
- ☐  Your automation system with EBX

But above all, you need to have understood something:

| You don't need to know everything before you start.

You need to: START → TEST → MEASURE → IMPROVE.

It's this loop that will make you progress.

YOUR NEXT OBJECTIVE

Don't aim straight for \$10,000. Your first goal is much simpler:

- Publish your first product.
- Then your second. Then your tenth.
- Get your first sale.
- Understand why it worked.
- Do it again.

EBX: YOUR ACCELERATOR

To follow this method faster, use EBX to centralise and speed up your eBay.com workflow.

 Access EBX here: ebx.army/aff-business (Affiliate link)

 Code: EBX-AFF-BUSINESS

| And now, close this document and open your computer. Your shop won't build itself by reading this training. It will build itself by applying what you just learned.

Over to you.
